WILL ORGANIZE A **BRANCH CONGRESS**

H. L. Thompson, of American Mining Congress, in City for Organization.

SAYS MINING MEN MUST HELP INDUSTRY

State Branch of Congress Will Wield Great Good for Everyone.

the American Mining Congress, is in Sait
Lake for the purpose of organizing a
branch of the congress for the Sait Utah. Mr. Thompson is known to pracdeally all the leading mining men of the State, and his task here will prove both pleasant and successful, for since the failure of the Utah Mine Owners' asso- Col Con ciation to assert itself successfully, some move to organize the mining interests of

ciation to assert itself successfully, some move to organize the mining interests of the State for their own protection has been both logical and badly needed.

Mr. Thompson points out that Sait Lake City, geographically, is the hub around which the metal industry revolves, and the one surprise to all the mining men of the country is that the operators of the State have not banded together for their own protection and welfare generally. To The Tribune yesterday, Mr. Thompson said:

"I find that the best-known mining men of Colorado, Arizona, Washington, Alaska, Montans, in fact, of the entire Western region, want to know why Utah operators, occupying the central portion of the mineralized area of the West, fall to recognize the importance of establishing State branches of the American Mining Congress. Their point is well taken for if anything is needed here it is concerted and intelligent endeavor to protect the mines and the mining industry from the encroachments of the Smelting Trust. I intend to see all the operators here possible, and I feel that Utah should make the largest and most prosperous of all the branches.

"In Arizona and Sonora we have a branch of 140 members. In Seattle the branch has a membership of 120, while Spokane has 65. In Sait Lake City the congress should have a branch with a membership of 250 or 200, and the good to be accomplished will more than repay the members the first instance the branch is called on to assert itself. In each State we are forming a branch to work both independently of and in conjunction with one another. It is our purpose to watch and regulate every way within our power railroads and railroad freight rates on ores; to prevent the Smelting Trust from securing ownership over the prosperity of the mines, and their mines protection if working in conjunction with one another. It is our purpose to watch and regulate every way within our power railroads and railroad freight rates on ores; to prevent the Smelting Trust from securing ownership over the prosperity of the m

HARRIS SEVEN TROUGHS LEASE KEEPING BUSY

With a view to exploring the ledge which passed through the shaft at a depth of around one hundred and twenty feet and cutting other ore bodies which are known to traverse the ground, crosscuts, east and west, were started a few days ago on the one hundred and fifty foot level in the Harris lease of the Seven Troughs Florence Mining and Leasing company on the famous estate of the Seven Troughs Mining company, near Vernon.

Vernon.

It is estimated that it will require from twenty to thirty feet of crosscutting to the east to encounter the ledge which passed through the shaft at the point named, and from which picture rock and named, and from which picture rock and ore giving assays of nearly four hundred dollars a ton were taken. It is figured that it will require about a week's work to catch the ledge to the east and it is confidently expected that a good body of ore will be disclosed when the work is accomplished. Important discoveries are also expected in the west crossout. Both crossouts are advancing at a rate of about three feet a day, and there is a steady improvement in the appearance of the lease.

steady improvement in the appearance of the lease.

In addition to crosscutting, the sinking of the shaft is being pushed with all possible vigor. The shaft is now down about one hundred and sixty feet. It will be sent down to the two hundred and five, foot point, which will correspond to the two hundred and thirty foot level of the fabulously rich Seven Troughs mine, lying four hundred ret to the south of the lease. The drift on the two hundred and thirty foot level in the Seven Troughs mine has been run more than half way toward the Harris lease. When the two hundred and five foot point is gained in the lease, an extensive campaign of crosscutting and drifting will be inaugurated.

Seven Troughs Miner.

ONE COLORADO FACE NINETY FEET WIDE

A prominent mining man of Salt Lake who was a visitor to Tintic during the rather premature smelter celebration festivities, and who went through the Colorado Mining property, has some figures to give regarding this mine that flustrate what a big proposition it really is. The ore body, it will be recalled, was encountered between the 250 and the 300-foot levels, and the management has done enough work to practically establish its continuity for 2500 feet within its own lines. For a large part of this distance the ore has not been opened up actually but it is had in the north and the south shafts, while on the Soux property the same ore body is had in rich form.

This visitor states that near the north shaft, and within 200 feet of the Beck Tunnel lines, the width of the ore body is now shown to be 96 feet, and that 95 feet of width is composed of about the finest looking ore he ever saw anywhere. He figures that the company has in this one ore body between \$1,000,000 and \$8.000,000 worth of ore, from which he expects the company to wring fully \$4.000,000 for dividend purposes. This brings his estimate close to the figures given in these columns several days ago, which were that the ore body had been worked out for perhaps one-eighth of its extent, and in so doing the company has paid over \$600,000 dividends. The visitor also states that the ore body is being explored to within 200 feet of the Sioux lines, and it is still looking like its original self.

Colorado Dividend.

Colorado Dividend.

Local circles are of the opinion that the directors of the Colorado alining company on the 18th of this month will not post over 12 cents, and possibly not more than 8 cents per share dividends, for the reason that only a portion of the shipments provided for to the United States company has been made and settled for. It was thought for a while that 20 cents a share would be distributed, but the difference in opinion was fairly well cenicated Monday on the exchange.

Ore and Bullion. The ore and buillon report for Monday, given by McCornick & Co., was as follows: Ore received, \$20,000; buillon, \$35,-000.

STOCKS SLUMP ON THE EXCHANGE MONDAY VIRGIN FIELD IS

Business was rather slow on the local exchange Monday, and the lowering prices were a delight to the short element. Colorado, the leader of the Tintics, was weaker than it has been for weeks. During the day a total of 68,650 shares of stock passed hands, representing a market value of \$51,172,25. The following were the closing unlisted and listed stock transactions:

Review of Denver, J. E. Busch of Rhyo 14.75 2.25 .091 .10 .07 lite, Nev., gives a comprehensive description of the Virgin oil fields of Utah which will bear repetition. The interview fol

Prominent Rhyolite, Nevada,

Man Sees Great Future for

Utah Oil Section.

CAPITAL NEEDED TO

The Virgin River district is located in the southwestern part of Utah, of which Virgin City is the nearest town, it being forty miles from the San Pedro, Los Angeles & Salt Lake railroad, the nearest supply point. It is thought that the carliest settlers of this section were the Mormons, who engaged in agricultural pursuits, paying no attention to the mineral resources of the surrounding country. Oil scum found on a spring in the vicinity led to investigation, but as capital could not be interested at the time to exploit and prospect, the country lay dormant until January, 1907, when prospectors in the employ of Taylor. Remick & Company of Rhyolite, in passing through the country, were attracted by the indications of city. Oil croppings were found from which crude oil could be sweated over a brush fire, and the indications that oil could be found in commercial quantities led to the location of considerable ground.

"For expert opinion on the Virgin River section," said Mr. Busch, "I refer you to Bulletin No. 240, United States Geological Survey, which forms part I. of contributions to Economical Geology, 1907. This section was also described by C. E. Dutton of the government survey, in a report published a quarter of a century ago, entitled "The Geology of the High Plateau of Utah." It has recently been described by J. B. Benson of Salt Lake City, former field engineer of the American Smelting and Refining company.

"Our company, the Virgin Oil and Development company, is incorporated under the laws of Nevada for 1,000,000 shares of a par value of \$1 a share, and is fully qualified under the Utah State laws. The company was incorporated April 28, 1907, and had its first machinery upon the ground in the following May 2nd had erected a derick and struck oil 37 July 15.

"This well, from a depth of 700 feet, has produced 2500 barrels of oil, and it is still pumping at the rate of 35 barrels will pumping at the rate of 35 barrels. The Virgin River district is located in the southwestern part of Utah, of which

Metal Market. The metal quotations for Monday, posted by McCornick & Co., were as follows Silver, 52½c; lead, \$4.50; copper, 12¾c.

RICH OLD DISTRICT BEING REJUVENATED

South Fork Big Cottonwood Doing Much Work in Search of Ore.

A mining section of Utah that has provided some mighty fine history in the early days and which has hardly been scratched for its metallic wealth is the South Fork of Big Cott nwood, where a greater activity is now apparent than at any previous time. Sam Porter of the Revall Mining company, accompanied by Fied Dern, made a visit to this region Sunday and Mr. Porter is more than impressed with the work that is being done on all sides in this part of the Wasatch

The Rexall, he states, is still sending the long tunnel over toward the Alta camp, being in now 550 feet. The management expects the next 150 feet 12 bring the face of this tunnel into the contact and into the contact and into the contact and into the contact and into the ore bodies known to exist. The company is somposed of we'l known Sait Lake mining and busiliess men, and they have been busy all winter. Two of the other active companies up that way are the Cardiff and the Raby McKee, both of which are making splendid headway with three shifts toward their resources. The American Consolidated has its tunnel in 700 feet and is employing a good force of men.

The owners of the noted Carbonate mine are now installing an aerial tramway, which, when completed, will bring down the mountain a generous tonnage of \$60 carbonate rock to the market. This property was idle eighteen years after a period of usefulness, during which \$400,000 worth of ore was shipped. The East Carbonate company is just beginning to develope its ores, while the Kennbeck is pounding away vigorously. The latter mine has produced \$700,000 worth of ores. Mr. Porter says that the new period of activity up that way is bound to produce splendid results. camp, being in now 650 feet. The man-

WHO IS BACK OF THE OHIO COPPER MATTER?

Newhouse, Guggenheims and Unknown Parties Mentioned as Pure Guess.

Whatever deal there is on for the control of the Ohlo Copper company those back of it have succeeded so far in keeping their trail mighty dim, leading nowhere and coming from nowhere. The first ray of light on the deal was the news from Boston that P. C. Thompson was prominent in engineering the trade to success. Mr. Thompson is well known in local circles, being at one time a partner of R. J. Evans, and more recently with H. C. Wile in the brokerage business.

ner of R. J. Evans, and more recently with H. C. Wile in the brokerage business.

Heretofore it has been understood out West that Mr. Thompson had the backing of Samuel Newhouse, and local circles naturally are asking if Mr. Newhouse is one, or the one, who seeks the control of this Bingham red metal mine. Some profess to believe that Mr. Newhouse is back of the present deal, others believe that Mr. Newhouse is back of the present deal, others believe that Mr. Newhouse is back of the present deal, others believe that Mr. Newhouse and the Guggenhelms are the powers behind the trade, while still others say it will prove up in time to be an absolutely new crowd altogether.

The mention of Mr. Newhouses a name with the Ohio. Copper company again reminds local circles of a couple of years ago when he was reported to be considering taking up this proposition. That was long before Mr. Heinze assumed control, and it was thought that Mr. Newhouse was pretty far on the track of the Ohio when he was frightened from the nest, as it were, by a newspaper article, which handled the matter from a stock standpoint rather than from a mining view. Mr. Newhouse came out with a statement in which he said that if he did take over the property he would do so with the purpose in view of authorizing a large bond issue to prove up the territory. Since that time the resources of the mine have been shown in a very favorable light, and it is a prize that Mr. Newhouse or have been shown in a very favorable light and it is a prize that Mr. Newhouse of the Guggenheims could well afford to con-

New York Letter.

New York Letter.

James A. Pollock & Co., bankers and brokers, 5 West Second South street, furnish the following, received over their private wire yesterday afternoon.

Walker Letter—New York—Market today was soft and there was profit-taking. There was no active trading. In the middle of the day the market was dull. The true was good, however, and there was little pressure. In the afternoon prices stiffened and closed strong. The steel stocks were well taken and the preferred made a new high price. We look for a fairly active market with good buying on breaks.
